

Computer Color Matching System for Textile!

AUCOLOR-TX10

AUCOLOR-TX10 is Computer Color Matching System for textiles which can handle mixed fabrics of 5 materials.

AUCOLOR-TX10 is adopted by many dyeing factories in JAPAN.

Personal Computer
(with Back up function)

Spectrophotometer
(Photo is bench top type Konicaminolta "CM-3600A")

- AUCOLOR-TX10 makes a recipe based on registered dyestuff reference data.
- AUCOLOR-TX10 has 3 useful functions to support you to choose dyestuffs and make a recipe. "Calculation", "Automatic choice", "Combination choice"
- AUCOLOR-TX10 can connect with CCK and export recipe data.

Induction Merits

Cost Down

Reduce sample cost

Reduce the number of making samples and shorten the time of process and cut dyestuffs losses.

Select the best suited recipe

Prepare a recipe balancing the quality and cost, after confirming the dyestuffs cost.

Stable quality

Eliminate individual differences

Standardize the color judging criteria based on the measured value.

Effective use of saved data

Record recipe data and it can be used for repeat orders.

Productivity improvement

Improve work efficiency

Enhance work efficiency of post-process due to stable recipe making.

Effective use of past data

Make a recipe with ideal combinations based on recorded data.

The appearance and specifications are subject to change for improvement without notice.

CCM Making a recipe [Calculation] [Automatic choice] [Dyestuff Combination]

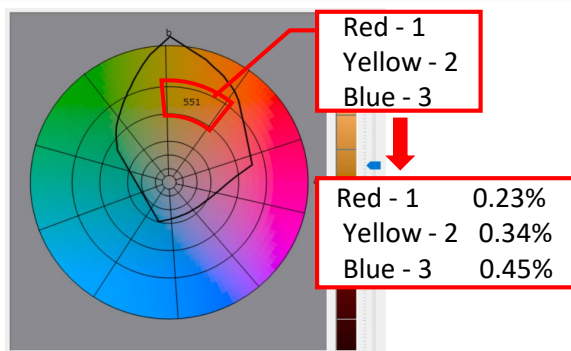

Calculation : Choose the dyestuffs candidate and prepare a recipe with designated number of dyestuffs

Calculate 8 recipe choices by considering color difference, dyestuffs cost and color rendering. Prepare recipes balancing quality and cost from several dyestuffs choices.

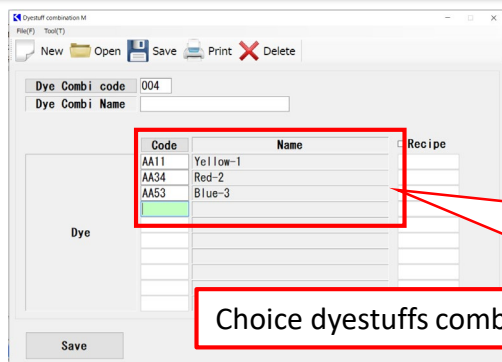

ΔE	0.00	Yellow	0.284%
COST	34.80	Red	0.574%
Meta	0.66	Blue	0.828%

Automatic choice : Prepare the recipe with registered dyestuff combinations on the color space

Register dyestuff combinations on the color space. AUCOLOR-TX10 chooses the dyestuff combinations close to the target color automatically and calculates the recipe. AUCOLOR-TX10 is used by dyeing factories where issue many recipes a day.

Dyestuff combinations : Prepare the recipe with registered dyestuff combinations

Register dyestuff combinations considering the dyeing speed and frequency of use. This function shorten the time of entering each dyestuff data.

Code	Name
AA11	Yellow-1
AA34	Red-2
AA53	Blue-3

System Line up

Computer Color Kitchen for Laboratory. Dispense the dyestuffs based on the recipe. AUKITCHEN-C100 is good at dispensing small quantity.

Weighing multiple dyestuffs simultaneously by using a dispenser. Mini volume measurement type with a turntable.

Making stocks of the dyestuff for a dispenser. Once you put the dyestuff, it is diluted to the desired concentration automatically.
